Hey guys,

Mark Seaton has asked for info on "typical" use rates for 2,4-D on pasture and range.

I think it is around 1.0 lb ai/A, but if you have additional info, it would be appreciated.

Probably need a pretty quick turn around on this one.

Hi, Harold,

Go 'Pack!

Can you direct us toward information on typical use rates for 2,4-D on rangeland/pastureland?

Thanks in advance.
