Subject: [Benfluralin \(Benefin\)](#)

Today I spoke to one of our extension agronomists with Oregon State University. While she confirmed that benefin was not widely used in her area she also expressed her desire that this use be retained because of concerns over weed resistance management. The more tools that growers have in their tool box the easier it is for them to alternate between control chemistries and the less likely that resistance will develop.

Thank you again for requesting our input.
