

Copper Use in Hawaii -- Additional Information Request about Mango

On 8 Mar 2007 at 16:11, Michell.Richard@epamail.epa.gov wrote:

Hi Cathy,

I forgot to ask if the proposed 30 day repeat application interval presented a problem for the bloom period applications on mangos. Actually, I only found one copper label that addressed bloom sprays and it recommended weekly applications during bloom. All the other labels only recommended monthly applications from fruit set thru harvest.

Thanks,

Rich
