Subject: Dimethoate Use on Cherries in Idaho and Montana

Jane and Rick,

EPA's BEAD entomologist would like more information pertaining to the need for dimethoate on cherries in Montana and Idaho.

Both of these states have SLNS but the literature is pretty lean on dimethoate use in these two states for cherries. EPA is wanting to make another round of risk mitigation proposals next week so please provide me contact information to provide to EPA, if you have any as soon as possible. I checked the crop profiles and PMSPs and did not find these two states with submissions for cherries.

Many thanks!

Teung
