Comments in response to: *Ethofumesate Risk Assessments; Notice of Availability, Federal Register* Notice March 30, 2005 (Vol. 70, No. 60) [OPP-2004-0346; FRL-7704-3]

The only ethofumesate product licensed for sale in Hawai'i is Prograss (432-941). The only reported use of ethofumesate in Hawai'i is on **golf courses** to control grasses (crabgrass and others) and nutsedge. Not very much of the product is used. However, it is one of only a few herbicides that can be used on warm and cool season turf grass, and can be used preemergence and postemergence. Some courses with bentgrass use Prograss.
