Subject: Malathion use in large-scale ornamental production

I am responding to your request for specific information regarding malathion use in large-scale ornamental crop production. Based on our comment coordinator contacts, malathion is not used in large-scale ornamental plant production in Arizona, Colorado, New Mexico, or Hawaii.

The following information was received from California and Oregon. In addition, there are no known applications of malathion in Christmas tree production in Oregon.

What application methods are used in large-scale field operations that produce ornamental plants?

In California, 1106 malathion applications were reported in outdoor nursery production in 2012. Three were aerial applications and the rest were by ground equipment. In Oregon, malathion applications are typically by airblast sprayers or hydraulic boom sprayers, some of which have over-the-tree row drop down booms.

For each application method used, we need the following use directions:

- a. *Maximum single application rate (in lbs ai/A)*
- b. *Recommended dilutions (gallons of finished spray per acre)*
- c. *Maximum number of applications per growing cycle and per year*
- d. *Minimum retreatment interval (days)*

In 2012, the maximum single application rate for aerial applications was 1.25 lbs ai/acre in California. The dilution rate was not reported.

The maximum single application rate for ground applications is not known with certainty. The Pesticide Use Reporting data from the California Department of Pesticide Regulation for malathion applications in nursery production are in the attached spreadsheet. Column K in the spreadsheet is my calculation of lbs ai/acre and takes into account the unit treated as either acres or square feet. The very high rates reported may be due to reporting errors (for example, reporting number of ounces but with gallons as the unit of measure). For instance, row 2 is a reported application of 0.92 lbs Aqua Malathion 8 to 2500 square feet, which is 12.9 lbs ai/acre. In the 2012 California data, the average application rate is 2.29 lbs ai/acre but the average is heavily skewed by the few, very high rates (potentially reporting errors). The median application

rate is 1.53 lb ai/acre and is probably closer to the typical application rate. In Oregon, the maximum application rate recommended by Oregon extension is 2.5 lbs ai/A. Recommended dilutions for are 2.5 lbs ai/100 gallons. Actual dilution rates are not known.

The maximum number of applications per year is two and the minimum retreatment interval is 10 days. Neither of these are typical grower practices.

If you have any further questions, please contact me.

Sincerely,

Jim Farrar, PhD
