I just received this response, pasted below. It is from a person involved with Hawaii's poultry industry. (The "We" in the message would refer to some poultry producers.)

I hope it is not too late to be useful.

### **Response:**

We use the liquid form of Rabon. However I think we should support the re-registration of those dust form pesticides because if there is future growth in the cage-free production of eggs in the future. These products would be used in the dust boxes to control parasites.
