Subject: Acibenzolar: Importance in IPM Programs

I am responding to your request for information about the importance of acibenzolar in Integrated Pest Management (IPM) programs. This response from the Western IPM Center provides input from a seven-state region: Alaska, California, Idaho, Montana, Oregon, Utah, and Washington.

Cranberry: (Information provided by Kim Patten, Washington State University)

Acibenzolar is not widely used in cranberry production in the Pacific Northwest (PNW). It is estimated that less than 1% of growers are using it. It has no role in current IPM programs. With fenbuconazole (Indar), azoxystrobin (Abound), and prothioconazole (Proline) now becoming available, growers will use these instead. If growers were to lose chlorothalonil (Bravo) they might look to acibenzolar; however, even if that happened growers would not likely shift to using acibenzolar as no European Union Maximum Residue Limit has been established for acibenzolar on cranberries.

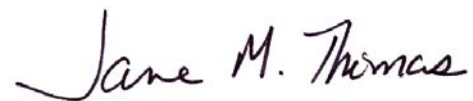

Lettuce, Pepper, Spinach, Tomato: (This information is provided by Mike Davis, University of California, Davis)

In California the primary use of acibenzolar is for the control of downy mildew on lettuce and spinach and bacterial leafspots on tomato and pepper. This use is not characterized as important because acibenzolar has relatively weak activity against the pathogens causing these diseases. In some situations it seems to have benefits when used with other fungicides. Used alone, it doesn't provide much disease control.

I am attaching, as a separate file, a spreadsheet of the 2011 California acibenzolar use data.

I hope you find this information useful.

Sincerely,

A handwritten signature in dark ink that reads "Jane M. Thomas". The signature is written in a cursive style with a large, sweeping initial "J".
