Riverdale, MD 20737-1237

The following information is provided to you from the Western Integrated Pest Management Center regarding the retreatment interval for dimethoate use on succulent peas. On March 15 you asked "Can pea growers live with a 7 day application interval instead of five days?" I am responding on behalf of a six-state Pacific Northwest (PNW) region comprised of Alaska, Idaho, Oregon, Montana, Utah, and Washington. All of the people that replied to my query (see the industry contacts on the attached sheet), responded that a seven day retreatment interval was not problematic.

Thank you for asking for grower input on this very important issued. I am also attaching a contact list for your use should you have further questions.

Sincerely,

A handwritten signature in cursive script that reads "Jane M. Thomas".
